VARUN VISHWA

9074485206 varunvishwa169@gmail.com LinkedIn Portfolio

Final-year B.E. Computer Science and Engineering student specializing in AI product development, LLM-based applications, machine learning, and software engineering. Hands-on project experience building AI-powered applications, Retrieval-Augmented Generation (RAG) systems, workflow automation, API integrations, and mobile application solutions. Proficient in Python, SQL, Flutter, Firebase, TensorFlow Lite, LLM integration, prompt engineering, and n8n automation. Interested in developing scalable, reliable AI-powered products that solve real-world problems.

EDUCATION

Dhanalakshmi Srinivasan College of Engineering
B.E. in Computer Science and Engineering

Holly Trinity School
Higher Secondary in Computer Science

SKILLS

Python • Java • C++ • SQL • Flutter • Firebase • Mobile Application Development • AWS • Nginx • Git • GitHub • Visual Studio Code • Artificial Intelligence • Machine Learning • Large Language Models (LLMs) • Retrieval-Augmented Generation (RAG) • Prompt Engineering • TensorFlow Lite • REST APIs • API Integration • Webhooks • Workflow Automation • n8n • Figma • Canva

PROJECTS

StudyMate | AI-Powered PDF Question Answering System
Python · Streamlit · PyMuPDF · Hugging Face models · FAISS · LLM integration
Developed an AI-powered document question-answering project using Python, Streamlit, PyMuPDF, Hugging Face models, FAISS, and LLM integration.
Designed a workflow for extracting PDF content, generating text embeddings, retrieving relevant document passages, and producing context-aware answers.

AI Workflow Automation using n8n
n8n · APIs · Webhooks
Built automated workflows for content generation, RSS monitoring, and AI-powered notifications.
Connected multiple APIs and implemented webhook-based integrations to reduce manual work and support scalable automation.

VedCrop | AI Crop Disease Detection
Flutter · TensorFlow Lite · Firebase
Developed an AI-powered mobile application concept to identify crop diseases from images and provide treatment recommendations.
Designed for offline diagnosis using Flutter, TensorFlow Lite, and Firebase.
